MI HUNT LAND

Field guide for hunters

Michigan public hunting land on your phone, with hunting hours, wind, weather, your stands and hunt log, trail cam photos, and your hunting partners. Most of it keeps working with no cell signal.

hunt.tradersedges.net

Contents

1 **Getting started**
Sign in, add to your home screen, the buttons

2 **Public land and map layers**
Land types, backgrounds, overlays

3 **Hunting hours and the day's outlook**
Hours, weather, pressure, moon, verdict

4 **Pins and wind**
Stands, blinds, cams, sign, good winds

5 **Hunt log and your patterns**
Sightings, sits, what works where

6 **Trail cam photos**
Add, view, cam checks

7 **Scent cones**
Where your scent is blowing

8 **Go to**
Arrow and distance to any pin

9 **Tracks**
Record your walk, find your way back

10 **Lines and areas**
Property lines, routes, bedding, plots

11 **Measure and safety zones**
Distance, acres, 450 ft rings

12 **Weather radar**
Live rain and the last hour

13 **Possibly landlocked land**
Public land no road reaches

14 **Offline maps and search**
Before you lose signal

15 **Hunting partners**
Share what you choose, see each other

16 **Settings**
Text size, night mode, screen on

17 **Sync, backups and good to know**
Your data, limits, the rules

1 Getting started

SIGN IN

1. Open **hunt.tradersedges.net** in Safari (iPhone) or Chrome (Android).
2. Enter your email. A one-time code is emailed to you; type it in. You stay signed in for a while, then it asks again.

PUT IT ON YOUR HOME SCREEN

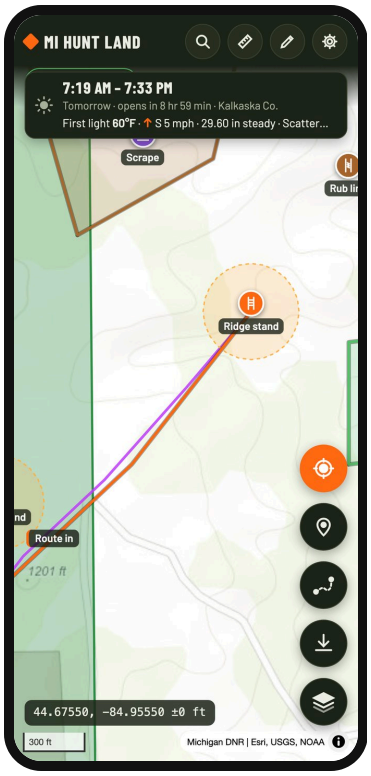

- **iPhone:** tap Share ⬆, then **Add to Home Screen**.
- **Android:** tap the ⋮ menu, then **Install app** or **Add to Home screen**.

It then opens full screen like an app, and works offline once it has loaded with a signal.

THE BUTTONS

Top bar	Search · Measure (ruler) · Draw (pencil) · Settings (gear)
Hours box	Today's legal hours and the weather. Tap it for the full outlook. After legal light ends, it shows tomorrow.
Right side	My location · My pins · Tracks · Offline maps · Layers
Status pill	When location is on: *On State Forest*, *Not on mapped public land*, and so on.

> **Tip:** press and hold anywhere on the map to drop a pin there. Tap any land to see what it is.

The map with your pins, a route, a bedding area and today's hours

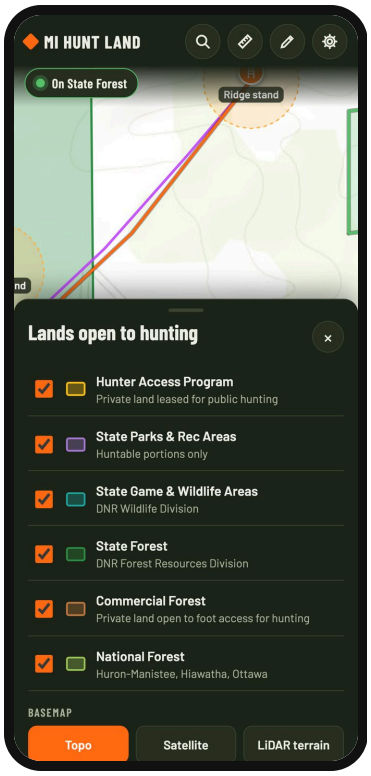

2 Public land and map layers

Tap **Layers** (bottom right) to choose what shows.

LANDS OPEN TO HUNTING

State Forest	DNR state forest land
Game areas	State game and wildlife areas
State parks	Only the parts open to hunting
National Forest	Huron-Manistee, Hiawatha, Ottawa
Commercial Forest	Private land open on foot for hunting
HAP	Private land leased for public hunting; check-in rules apply

Land boundaries are stored on your phone, so they work with no signal. Tap any parcel for its name and details.

Layers: land types, backgrounds, overlays

BACKGROUNDS

Topo, **Satellite**, **LiDAR terrain** (bare-earth shading that shows ridges, benches, draws and creek beds through the trees), **USGS Topo** and **Imagery + Topo**.

OVERLAYS

- **Forest stand cover type**: aspen, oak, pine, swamp conifer and more (zoom in).
- **DNR roads** (with ORV status), **DNR trails** (including hunter walking trails), **DNR parking**.
- **Sections and townships**, **Deer management units**.
- **Private land owners**: owner names and acres (Kalamazoo County).
- **Possibly landlocked public land**, **Weather radar** and **Scent cones**, each covered later in this guide.

Overlays load from the DNR as you move, so they need a signal.

3 Hunting hours and the day's outlook

The box at the top always shows legal hours for where you are (or the middle of the map) and the weather. Tap it for the full picture.

THE HOURS BOX

- Opens – closes, how long is left, and the county.
- Temperature, wind (the arrow points where it's blowing), pressure and its trend, and the sky.
- **After legal light ends** it switches to tomorrow: tomorrow's hours, the time until opening, and the forecast for first light.

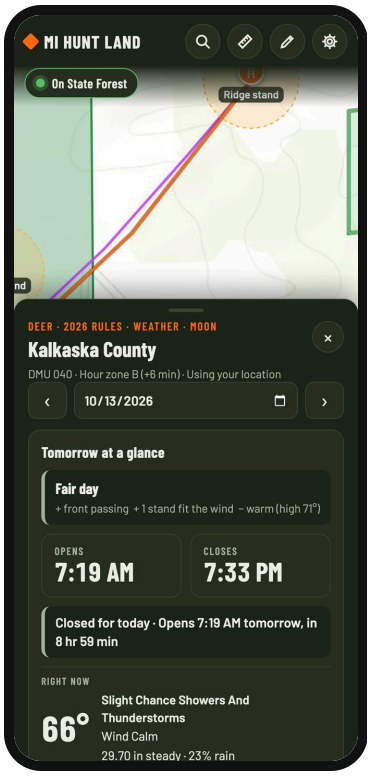

"AT A GLANCE" (TOP OF THE PANEL)

- **The verdict:** *Good day to hunt*, *Fair day* or *Slow day*, with the reasons: a cold snap and a pressure change count for it; strong wind, likely rain and heat count against.
- **Right now:** temperature, sky, wind, pressure, rain chance.
- **Outlook:** high and low, cold snap flag, what the pressure does, and conditions at first light and in the last hour.
- **Your stands nearby:** the times each stand's wind is right, and what your log says works there.
- Moon phase, and which deer seasons are open.

BELOW THAT

- **Next 7 days:** tap a day to plan it. ▼8° marks a cold snap; arrows show pressure (↓↑ is a front passing).
- **More detail:** the hours table, forecast wording, what the pressure means for deer, moon times, solunar periods, and the rules: seasons, antler restrictions, antlerless licenses, baiting.

> **What the research says:** deer move more on a temperature drop and when the pressure is changing. Solunar times are a tradition, not proven science; they're shown because hunters ask for them.

Tomorrow at a glance, after legal light

4 Pins and wind

DROP A PIN

- Press and hold on the map, or open **My pins** and tap **Pin my location** or **Pin map center**.
- Pick a type: tree stand, ground blind, camp, trail cam, buck rub, buck scrape, parking or other.
- Add a name and notes (access route, shooting lanes).

GOOD WINDS

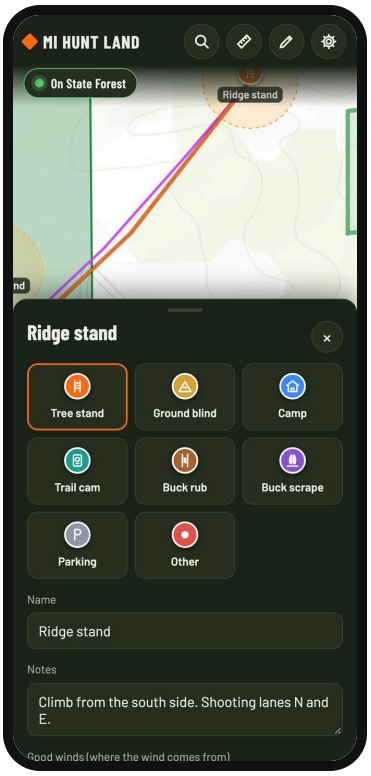

For stands and blinds, tick the winds the spot hunts well in (where the wind comes *from*). The pin then shows:

- Whether **right now** is a good wind, and the good-wind stretches in legal hours over the next days.
- A **Good wind / Wrong wind** badge in your pin list.
- Its good-wind times in the day's outlook (section 3).

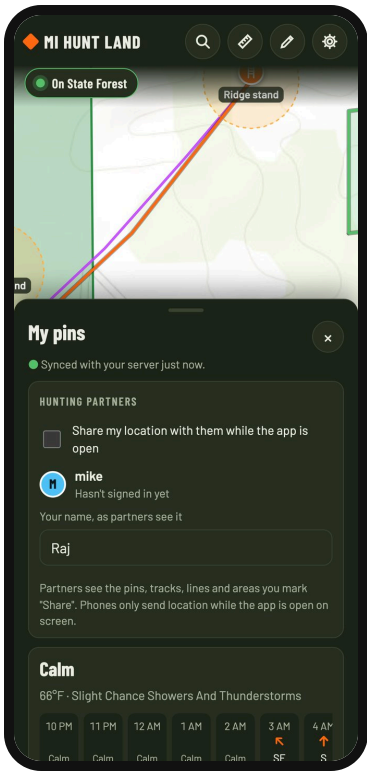

FROM A PIN

Go to	Arrow and distance on foot (section 8)
Drive	Driving directions in Google Maps
Share	A link anyone can open: spot, name and type only

My pins lists everything by distance from you, with the wind card for your area, your lines and areas, and backup buttons.

A stand: type, name, notes

My pins

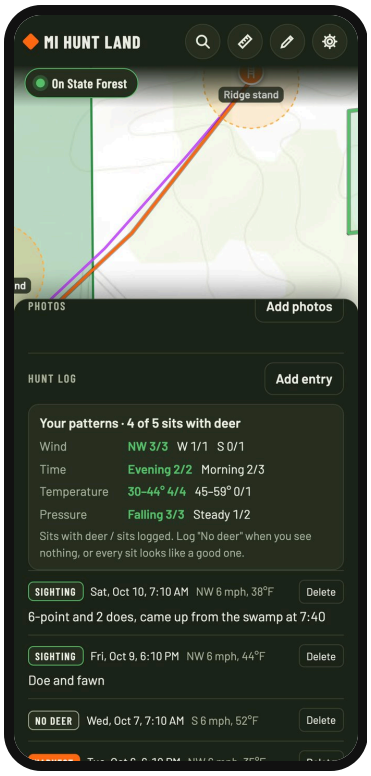

5 Hunt log and your patterns

Open a pin and tap **Add entry** after each sit:

- **Sighting**, **Shot**, **Harvest**, **No deer** or **Note**, plus what happened.
- The time and the weather (wind, temperature, pressure) fill in by themselves.

After **3 sits** at a spot, **Your patterns** shows what worked: sits with deer out of sits logged, by wind, morning or evening, temperature and pressure trend. The best one is in green.

> **Log the empty sits too.** Tap **No deer** when nothing shows, or every sit looks like a good one.

Patterns: NW wind 3 for 3

6 Trail cam photos

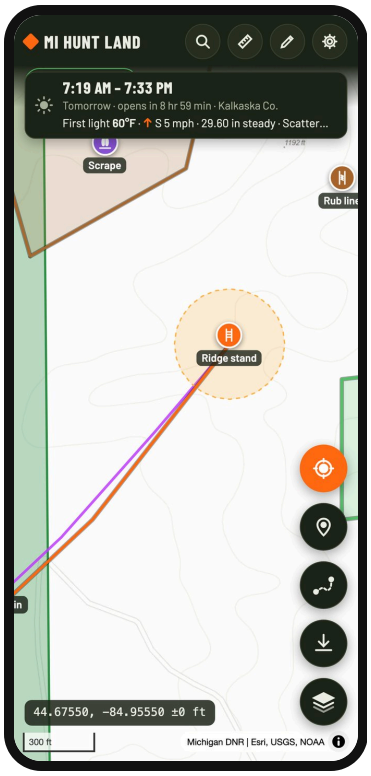

- Open a pin (usually a trail cam) and tap **Add photos**. Pick from your camera roll or Files; a whole card's worth at once is fine.
- Each photo shows the time the **camera** took it, not when you uploaded it.
- Your phone shrinks photos before uploading, so a big trail cam picture becomes about half a megabyte.
- On a trail cam pin, adding photos logs a **Cam check**; the pin list shows "Checked 3 days ago · 24 photos".
- Tap a photo for full screen: add a note ("8-point, from the swamp"), step through newer and older, or delete.

Uploading needs a signal. A photo you've opened once is kept for offline viewing.

7 Scent cones

Turn on **Scent cones** in Layers. Each tree stand and ground blind gets a wedge showing where your scent drifts for this hour's forecast wind, about 300 m downwind. In calm air it's a circle around the stand.

The cone turns **red** when it covers one of your trail cams, rubs or scrapes, and the pin list warns you ("Scent over Rub line now").

Scent cone from Ridge stand

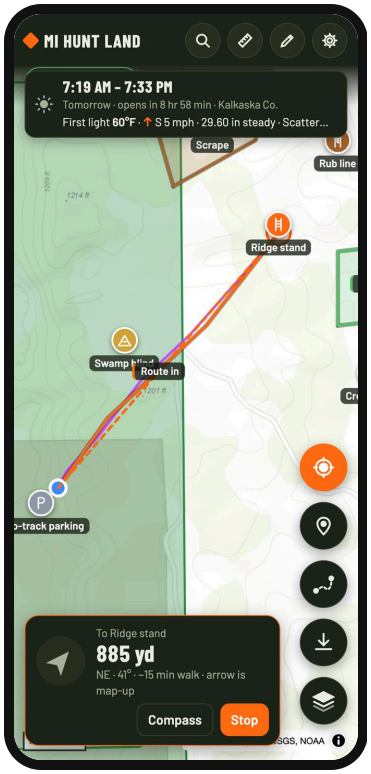

8 Go to

Open any pin (yours or a partner's) and tap **Go to**. You get:

- A big arrow pointing the way, the distance, compass heading and walking time.
- A dashed line on the map from you to it.
- A buzz when you're within about 15 yards.

The first time, your iPhone asks to use the compass. Allow it, or tap **Compass** later. Until it has the compass, the arrow points against map north ("arrow is map-up"); once you're walking it uses your direction of travel.

> **Works with no signal.** GPS and the compass don't need cell service. Tap **Stop** when you're there.

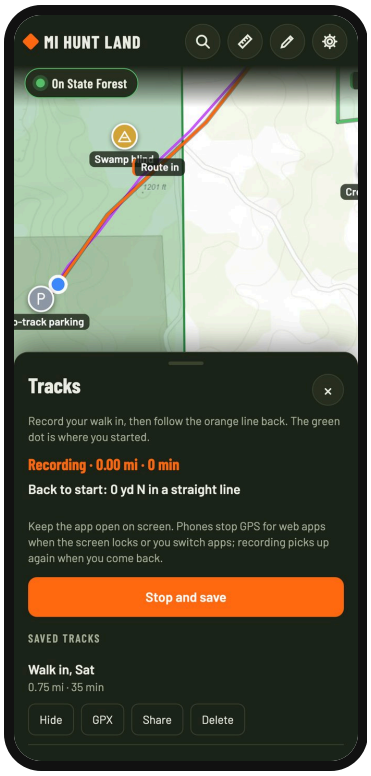

Going to Ridge stand

9 Tracks

Tap **Tracks** (right side), then **Start recording** as you walk in. The orange line follows you, the green dot is where you started, and a dotted line points straight back to it with the distance.

Stop and save when you're done. Saved tracks can be shown or hidden on the map, saved as GPX, shared with partners, or deleted.

> Keep the app open on screen while recording. Phones stop GPS for web apps when the screen locks or you switch apps; recording picks up again when you come back. Turn on **Keep the screen on** in Settings for long walks.

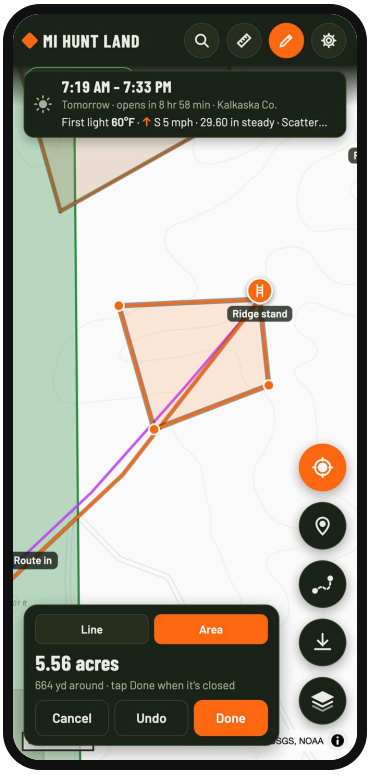

Recording, with the walk in from parking

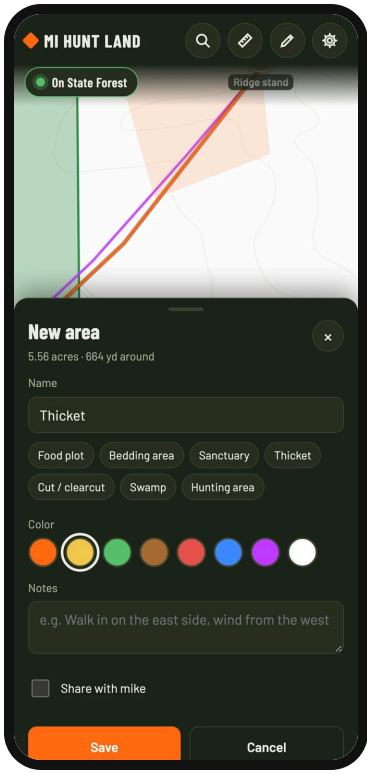

10 Lines and areas

1. Tap the **pencil** at the top.
2. Pick **Line** (property line, route in, drag line, shooting lane) or **Area** (food plot, bedding area, sanctuary, thicket).
3. Tap points on the map. The length or acres show as you go; **Undo** removes the last point.
4. Tap **Done**, then name it (or tap a suggestion), pick a color, add notes, and **Save**.

Tap a line or area later to rename it, **Change points**, or delete it. They're listed under My pins.

Drawing an area

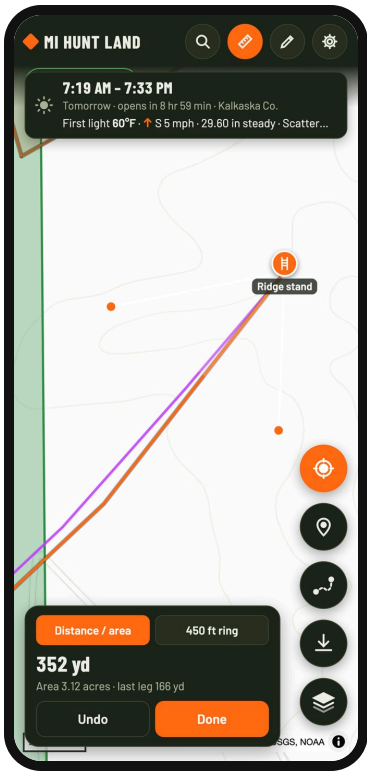

Naming it

11 Measure and safety zones

Tap the **ruler** at the top.

- **Distance / area:** tap points for the distance; three or more points also give the acres inside. Tap a pin to measure to it exactly.
- **450 ft ring:** tap a house or farm building to draw Michigan's safety zone. No hunting inside it, gun or bow, without written permission from the owner or occupant.

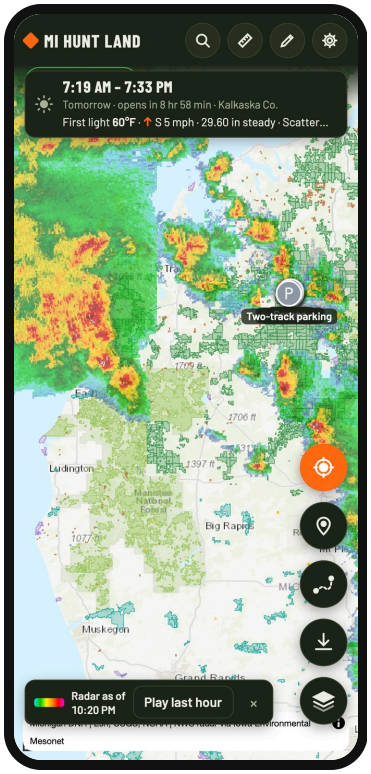

352 yd, 3.12 acres

12 Weather radar

Turn on **Weather radar** in Layers to see live rain from the National Weather Service, updated every 5 minutes. The bar at the bottom shows the time of the latest scan.

Tap **Play last hour** to loop the last 50 minutes and see which way the rain is moving. Tap **×** to turn radar off. Radar needs a signal.

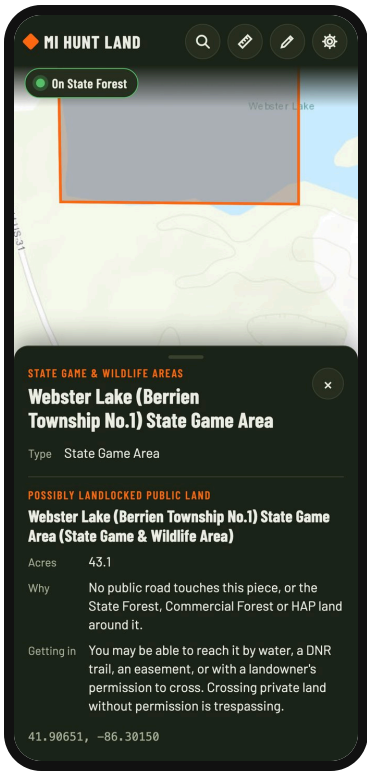

A storm line moving through

13 Possibly landlocked public land

Turn it on in Layers. Red pieces are public land that **no public road touches**, not even through neighbouring State Forest, Commercial Forest or HAP land. Pieces like these often see less pressure.

Tap one for its name, acres and how you might get in.

> **Getting in legally:** you may reach it by water, a DNR trail, a forest road, an easement, or with a landowner's permission to cross. Crossing private land without permission is trespassing.

43 acres on Webster Lake, Berrien County

14 Offline maps and search

OFFLINE MAPS

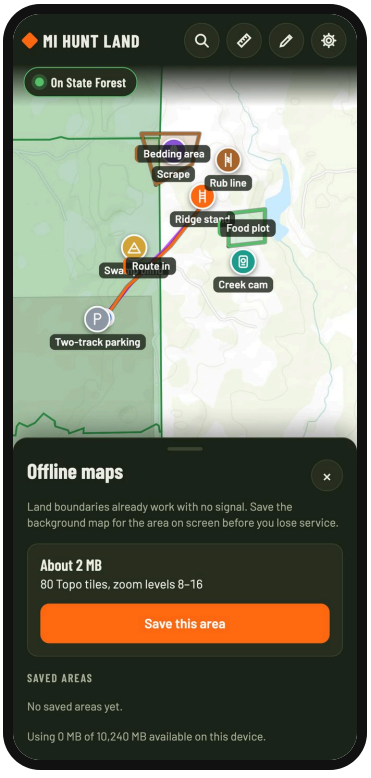

Land boundaries, your pins, the hours and the moon always work offline. The **background map** needs saving first:

1. With a signal, move the map over where you'll hunt.
2. Tap **Offline maps** (the down arrow), check the size, and tap **Save this area**.

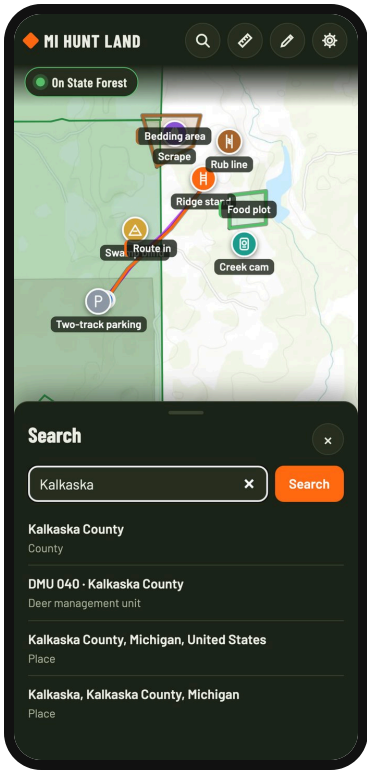

Save each background you want (Topo, Satellite, LiDAR) separately. Saved areas show as dashed outlines.

SEARCH

Tap the magnifier and search for a game area, town, your pins, a county, a DMU, a township and section (`T29N R2W S23`) or coordinates.

Save this area

Search

15 Hunting partners

If you're part of a hunting group, you can share the spots you choose and see each other on the map. Nothing is shared unless you tick it.

SHARE A PIN, LINE OR AREA

1. Open it and tick **Share with...** (your partners' names).
2. That shares only the **spot, name and type**.
3. Tick anything else you want them to see: **Notes**, **Good winds**, **Hunt log**, **Photos**. Each is off until you turn it on.

Tracks have a **Share** button in the Tracks list. Untick or delete something and it disappears from your partners' maps.

WHAT PARTNERS SEE

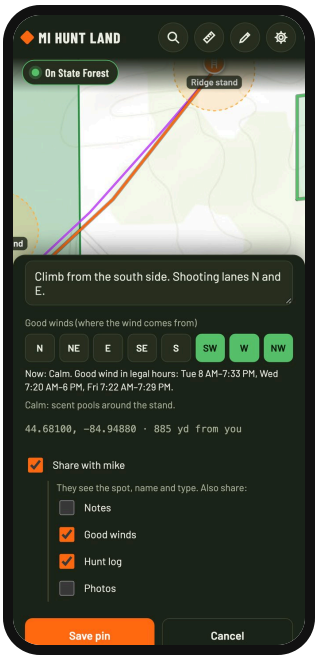

- Your shared pins with your initial on them, and shared tracks, lines and areas as dashed lines. They can look, and use **Go to**, but can't change anything.
- Only the extras you ticked.

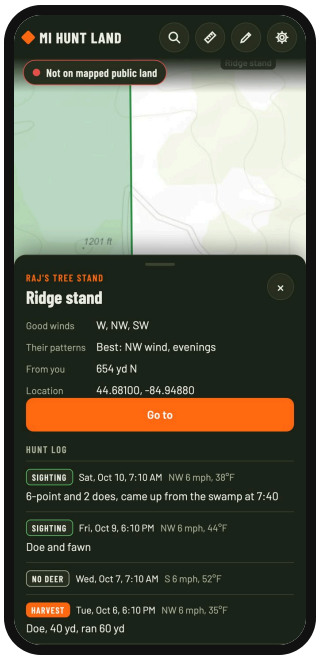

WHERE EVERYONE IS

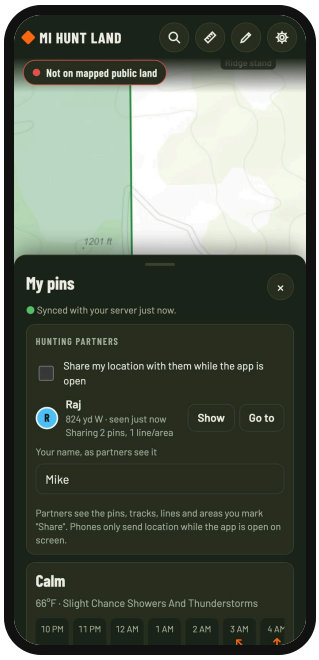

In **My pins**, under Hunting partners, tick **Share my location**. Partners see you as a blue dot with your initial and "seen 3 min ago", and the list shows how far away and which direction each one is, with **Show** and **Go to**.

> Your phone only sends your location while the app is open on screen. With the phone locked or another app in front, partners see your last spot and how long ago it was. Set the name partners see you as in the same place.

To join a group, ask the group owner to add your email.

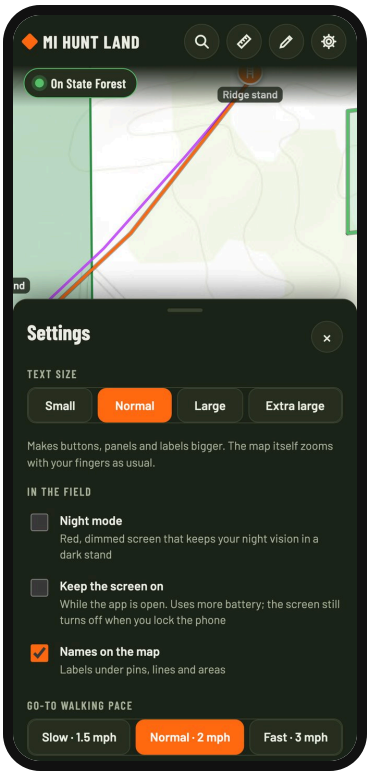

You choose exactly what to share	What your partner sees: the stand and the log you shared	Partners: distance, last seen, Go to

16 Settings

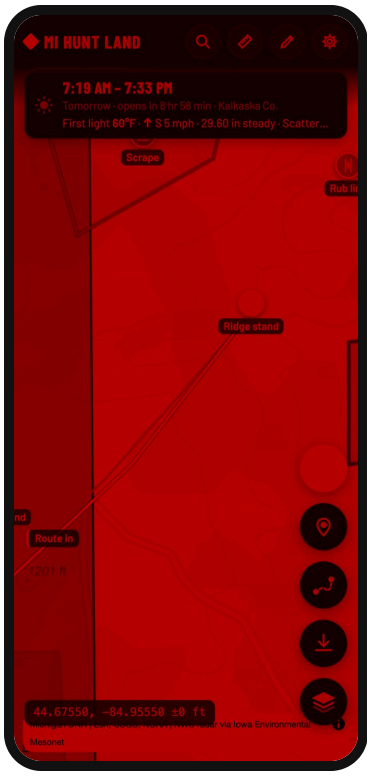

Tap the **gear** at the top right.

Text size	Small, Normal, Large or Extra large. Makes buttons, panels and labels bigger; the map itself still zooms with your fingers.
Night mode	Turns the whole screen red and dim, like a red headlamp, so you keep your night vision in a dark stand.
Keep the screen on	Stops the screen sleeping while the app is open. Handy with Go to and tracks; uses more battery.
Names on the map	Show or hide the labels under pins, lines and areas.
Walking pace	Slow (1.5 mph), Normal (2 mph) or Fast (3 mph), for Go to's walking time.
About	This guide, and **Check for update**.

Settings are saved on each phone separately.

Settings

Night mode

17 Sync, backups and good to know

YOUR DATA

- Pins, hunt logs, photos, tracks, lines and areas are saved on your phone **and** on the private server. Changes sync whenever you have a signal; the top of My pins says when it last synced.
- Sign in on another phone or tablet and everything is there.
- The server is backed up every night. You can also save your own copy: My pins, then **Full backup**. **Import** brings a backup or GPX file back in, and **Pins as GPX** opens in onX, HuntStand, Gaia and Google Earth.

GOOD TO KNOW

- **GPS only runs while the app is open on screen.** This is true for every web app on a phone.
- Weather, radar, overlays and photo uploads need a signal. Land boundaries, pins, hours, the moon, Go to and saved offline maps don't.
- If the app says you're signed out, reload it and enter a new email code.
- When an update comes out, the app reloads itself once. Settings, then **Check for update**, does it right away.

> **This map is a guide, not a legal boundary.** It doesn't show safety zones around buildings (use the 450 ft ring), posted closures, refuges inside open areas, or local ordinances. The hours and rules summarise the 2026 Michigan Deer Hunting Digest. Always check the full digest and Michigan.gov/DNRLaws before you hunt.
